# Release Notes 2.57 Tuesday, July 28th, 2020

Here are the notes for release 2.57. In this release, we created a new report that will let administrators know the "Authentication Methods" enrolled for the employees, and we also fixed a bug when generating reports in Microsoft Edge. We hope you like the fixes and enhancements completed.

## New Features:

1. There were none in this release.

## Enhancements/Add-ons:

1. **Report enhancement - Enhanced the previous "User Fingerprints" report:** We have enhanced the "User Fingerprint" report by now adding also all of the verification methods the employee(s) have to clock in and out, this means administrators will be able to see if the employee has any fingerprints enrolled, proximity card, pin, iris. The report name has changed also, and it is called "User Authentication Method."

## Fixed Errors/Bugs:

1. **Reports - Fixed an error when creating reports using "Microsoft Edge":** Our users would experience constant errors when making reports in "Microsoft Edge." This issue has been fixed, and now reports can be created without errors.

2. **Jobs and Timesheets - Fixed an error with job assignation for timesheet employees:** When assigning jobs using our "Assign to all projects" option, the jobs would not appear on the timesheet for employees to add entries.

3. **Access Control - Fixed an issue with mangers with specific privileges:** Managers with limited privileges were not able to log in. The users were receiving an error message.
