Release Notes 2.58 Tuesday, August 17th, 2020

Here are the notes for release 2.58. In this release, we created a new report that will let administrators see an audit trail of the employee status, we also fixed a bug in the "Australian" engine when using the "Multi Rates" feature. A small error was fixed in the mobile app for employees that work overnight. We hope you like the fixes and enhancements completed.

New Features:

1. **New Report - Employee Status Audit Trail:** This new report will show you a history of the employee status and the information of the user that made the employee "Active, Inactive, or Terminated'. The new report is located under the "General" reports.

Enhancements/Add-ons:

1. **Report enhancement - Enhanced the previous "User Fingerprints" report:** We have enhanced the "User Fingerprint" report by now adding also all of the verification methods the employee(s) have to clock in and out, this means administrators will be able to see if the employee has any fingerprints enrolled, proximity card, pin, iris. The report name has changed also, and it is called "User Authentication Method."

2. **API - "TimeTotals" endpoint enhancement:** Geo-location information can now be retrieved from the "TimeTotals" endpoint.

Fixed Errors/Bugs:

1. **Mobile App - Fixed an error when clocking in and out for employees that work overnight:** The mobile app had an issue with employees that will work overnight. It would confuse employees that worked overnight by at the moment of clocking out at the end of their shift, and the app would show the option to "Clock In" instead of "Clock Out."

2. **Australia Engine - Fixed an issue when creating "Multiple Rates" in the scheduler:**
    When clicking on a day on the scheduler, it should allow the user to create a "Multiple
    Rates" rule. However, the UI to create a Multiple Rate was not available. This issue is
    resolved.

3. **Construction Timecard - Detailed report issue:** Totals were showing incorrectly when
    creating this report. It will show extra decimals places that were not supposed to be in the
    report.

4. **Construction Timecard - Operation Error when selecting an employee:** Fixed an
    issue when selecting employees in the construction timecard while checking the option to
    'select all days"

5. **Access Control - "User Access Event " report issue:** Fixed an issue with the "doors"
    filter in this report. The list will open up upwards and all the available selections were not
    displaying.
