# Release Notes 2.65 Thursday, December 17th, 2020

Greetings everyone, here are the notes for release 2.65. In this release, we worked on fixing the "Approval Status" report to keep when an employee approves their timecard. Fixed a small bug when approving a timecard with PTO only and also enhanced one of the endpoints in our API. Kindly send us an email with your feedback to products@easyclocking.com, stay tuned for upcoming updates...
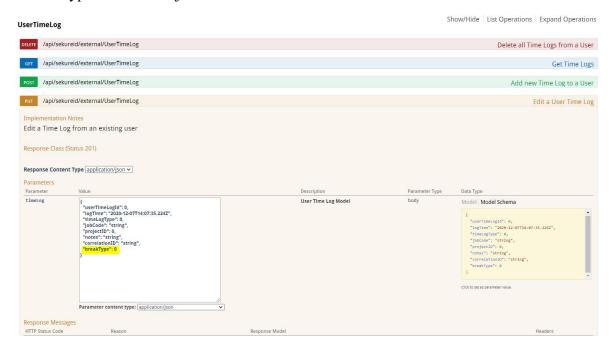

New Features:

1. **Employee Name sort - Instead of sorting by ID, you can also sort by employee name and selection will be saved:** Now when a user decides to sort by employee name, the selection will now be saved for that user, meaning if your last sort was by employee name, when you log off and log back on, the employee's name will be sorted by name instead of Id like it did before.

Enhancements/Add-ons:
1. **API - Added "BreakType" to the UserTimeLog endpoint for PUT method:** We have updated the PUT method in the UserTimelog endpoint to allow time records to be edited

with break type information just like it is done in the POST method.

Fixed Errors/Bugs:

1. **Timecard error- Issue when approving a timecard with PTO only:** An invalid data error would occur when an employee's timecard is approved with PTO only and when the option to "Show all days" was checked. This error has been corrected.
