

## Release Notes 2.69 Tuesday, April 6th, 2021

Howdy EasyClockers! Here are the notes for release 2.69. In this release, we made a couple of changes to the ADP Workforce Now Integration. We also made a change to our other integrations to execute if the service unexpectedly stops working. We also fixed a couple of report issues, one Xenio time clock issue with lunch and breaks. Kindly send us an email with your feedback to [products@easyclocking.com](mailto:products@easyclocking.com). Stay tuned for upcoming updates...

### New Features:

- **None on this release.**

### Enhancements/Add-ons:

1. **“ADP Workforce Now” integration enhancement - Ability to know which employee is synced to an integration:** When viewing an employee in the “Users” tab, you will be able to see a **red** text indicating the selected employee is currently synced to an integration on the account.
2. **“ADP Workforce Now” integration enhancement - Ability for other account admins to sync employees from ADP to EC:** Previously only the main account holder or the person that completed the purchase of the connector would only be able to sync employees. This has changed and now other admins can help in this process.

### Fixed Errors/Bugs:

1. **Xenio Timeclock - Issue with Lunch/Break indicators:** Fixed an issue within the Xenio timeclocks with the “Multi-breaks” punch indicators. Employees would have to wait an extra minute to be able to come back from lunch after the minimum required was completed. A new module is available for the Xenio devices. Kindly contact our team to receive this update.
2. **“Users” tab - “Yearly Rate” employees issue in employee profile:** Fixed an issue for “Yearly Rate” or also known as ‘salaried’ employees. When an employee’s profile was modified, the system would prompt the user to set the effective date of this change and

this was an incorrect behavior since it is only supposed to prompt the user for the effective date when a user is switched from hourly to yearly rate and vice versa.

3. **Critical Setting - “Show Rounded TimeCard Totals” issue:** An operation error would occur when this setting was enabled and the employee had bonus hours or bonus amount on their timecard.
4. **“Users” tab - Access level “username” duplicate issue:** When an employee was deleted from the system, the username tied to the user was not removed from the name of available tenants and when another employee was added with the same username, the system would show an error message stating the username was duplicate.
5. **Reports - Issue with “Actual vs Schedule Summary” and also “Work Analysis” report:** When running these reports for one day only, the report would provide the incorrect “actual” worked totals.
6. **Reports - Issue with “Paid Time off - Used” report:** When running this report, the “rate” information was inaccurate.

### Extras:

- Integrations
  - **Geotab Integration for account ProFrac (34861):** Make the GeoTab Integration check the last successful execution date and time and force the next execution 12 hours from the last one.
    - Because the execution of this system is being managed by the Task Coordinator Service, this improvement will be developed as part of the Task Coordinator Service and will affect all other Integration Services using the same technology as GeoTab Integration Service.
